

Ultra* secure

The Bunker

CASE STUDY

Ultra Secure Hosting Service Provider for Financial Services Client

The brief

Security has always been of prime concern to the client as most of its business is in payment services to merchants, and the value of transactions can be high. Their electronic money transfer system, via email needs a robust and secure infrastructure behind it. As Money Bookers services have grown in popularity, their requirements have changed. The Bunker's "Ultra Secure" message was made an attractive solution to Money Bookers Data Backup and Disaster Recovery requirements.

Our solution

We have provided Money Bookers with a low risk location from which they run their back up systems from, which gives the customer the flexibility to work on their system, and the peace of mind that no one else will be able to gain access to it. We have closely monitored their bandwidth requirements to ensure that it matches their need and work to understand and cater for their growth path.

What the client says

"The main reason for this was for security. Our service is similar to a bank's where we manage deposits. [This place] was formally a nuclear bunker so it shouldn't be a terrorist target.

"We have two hosting facilities. The Bunker is one of the most secure places in England where you could keep servers. Security is paramount to our customers."

Daniel Klein (Managing Director)
