

## CASE STUDY

# Finding the right partner to deliver exceptional peace of mind

Established in 1995, Sitekit has consistently maintained its position at the forefront of web content management systems (CMS) development in the UK. Its customers include corporations, government organisations

and enterprises in the financial, technology, travel and healthcare sectors. Sitekit is passionate about ensuring customers and partners have control over every aspect of their website.

## PRODUCTS & SERVICES

- Redundant, resilient connectivity
- UPS generator-backed power
- Colocation within an ultra secure, military-grade data centre

## EIGHT TIMES THE INDUSTRY POWER STANDARD

Sitekit was searching for a hosting partner that could fulfil its requirement to accommodate high-powered racks, housing the latest blade technology. The key requirement was for a bespoke solution, within an established data centre that offered Ultra Secure facilities and sufficient capacity to meet Sitekit's considerable space, power and cooling needs.

Sitekit found the ideal partner in The Bunker. The combination of ex-MOD architecture and the government's 1990 build specification for the housing of high-powered military machines provided a high specification and secure home for Sitekit's equipment.

Sitekit's racks plug into The Bunker's robust power supply which ensures a committed 20 amp power-feed per rack, and the capacity to burst up to a full 32 amp if required. This is more than eight times the industry standard.

All Bunker-based applications are protected by The TM Bunker Protocol, a proprietary, Ultra Secure, process framework. This, combined with the layers of resilience in The Bunker power and cooling infrastructure, made it possible to deliver the critical peace of mind that Sitekit and its customers were looking for.

**"THE BUNKER HAS CONSISTENTLY BEEN FLEXIBLE ENOUGH TO MEET OUR COMPANY NEEDS."**

-Martyn Bradshaw,  
Facilities Manager, Sitekit

## RESULTS & BENEFITS DELIVERED

- Outside of the high risk London zones, yet within easy reach of the capital, The Bunker's data centre in Kent provides sufficient space, power and the services that are increasingly difficult to find in most modern city data centres.
- The tailored solution provides a perfect fit with Sitekit's precise and demanding requirements.
- Added peace of mind is provided by The Bunker Protocol, a proprietary, Ultra Secure, process framework that protects all Bunker based applications.
- Extra layers of resilience are built into The Bunker solution, particularly when it comes to power supply and cooling infrastructure

## THEIR VERDICT

**"SINCE OUR MOVE WE HAVE BEEN ABLE TO EXPAND OUR CAPACITY TO MEET OUR CUSTOMER DEMAND. AND WE NOW HAVE THE PEACE OF MIND OF KNOWING THAT AS WE EXPAND, THE BUNKER WILL BE ABLE TO FULFILL OUR REQUIREMENT."**

-Martyn Bradshaw,  
Facilities Manager, Sitekit

## THE BUNKER PROTOCOL™

The Bunker Protocol™ is an all-encompassing methodology that secures against risk and ensures the most secure IT delivery in the UK.

The Bunker Protocol™ incorporates Physical, Human and Digital security capability and processes and wraps them with a governance and standards layer that ensures that client data and clients systems are continually secure against threats to confidentiality, integrity and availability.

## THIS IS ULTRA SECURE

- Physical** Military Grade data centres
- Human** All employees are fully background checked and our culture starts and ends with security
- Digital** We build and integrate systems in-house, Ultra Secure, from the source code up
